                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Command line parameters:
                                                                                                                                                                                                                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

DB: US-10-006-922A-12 (1-225) Score invention can be expressed by standard recombinant methodology. (II) are used a fluorescent markers and FRET partners. It is used for identifying protein-protein interactions. (II) is also suitable for multiplexed fluorescent analysis and FRET-based applications using existing Aequorea fluorescent proteins. (II) has improved brightness, reduced spectral cross talk, and is rapidly and efficiently expressed in mammalian cells. The key mutations in the encoding nucleic acids provide improved folding, brightness, and create (II) with sharper, more defined excitation and emission peaks when expressed in mammalian cells. The present sequence represents the coding sequence of a Discosoma sp. drFP583 protein, an Sequence 678 The invention provides a nucleic acid encoding functional red fluores CC protein (II) that differs from the sequence of an Anthozoan red fluorescent protein by at least one amino acid substitution, and with different fluorescent properties. The red fluorescent protein of the anthozoan fluorescent protein Proteins for Fluorescence Resonance Energy Transfer (FRET) comprise functional red fluorescent proteins, and the encoding nucleic acids, key mutations for improving the proteins function. 8 0 :: 361 301 481 421 141 101 181 181 161 121 81 61 41 61 MetGlyTrpGluAlaSerThrGluArgLeuTyrProArgAspGlyValLeuLysGlyGlu LysValLysPheIleGlyValAsnPheProSerAspGlyProValMetGlnLysLysThr AspGlyGlyValValThrValThrGlnAspSerSerLeuGlnAspGlyCysPheIleTyr LeuSerProGlnPheGlnTyrGlySerLysValTyrValLysHisProAlaAspIlePro HisAsnThrValLysLeuLysValThrLysGlyGlyProLeuProPheAlaTrpAspIle MetArgSerSerLysAsnValIleLysGluPheMetArgPheLysValArgMetGluGly AspTyrLysLysLeuSerPheProGluGlyPheLysTrpGluArgValMetAsnPheGlu TTGTCACCACAATTTCAGTATGGAAGCAAGGTATATGTCAAGCACCCTGCCGACATACCA CACAATACCGTAAAGCTTAAGGTAACCAAGGGGGGACCTTTGCCATTTGCGTTGGGATATT ACGGTCAATGGGCACGAGTTTGAAATAGAAGGCGAAGGAGAGGGGAGGCCATACGAAGGC ThrValAsnGlyHisGluPheGluIleGluGlyGluGlyGluGlyArgProTyrGluGly ATGAGGTCTTCCAAGAATGTTATCAAGGAGTTCATGAGGTTTAAGGTTCGCATGGAAGGA IleHisLysAlaLeuLysLeuLysAspGlyGlyHisTyrLeuValGluPheLysSerIle TyrMetAlaLysLysProValGlnLeuProGlyTyrTyrTyrTyrValAspSerLysLeuAsp BP; 205 A; 129 2.3e-140 1214.00 100.00% 100.00% 100.00% x AAH47654 (1-678) 90pp; English. ç; 178 Length:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          片
                                                                                                                                                                                                                                                                                                   The present invention relates to a method for destabilising a target protein in a cell. The method comprises a linker moiety which operatively couples a target protein (a reporter moiety) to a linear multimerised celestabilising domain, which is non-cleavable by a -NH-ubiquitin protein celedoproteases. The method is useful for detecting an activity such as compressed, protein kinase or phosphoprotein phosphatase activity and is celestage useful for identifying modulators of these activities. The method is celestage useful for developing novel assays for a wide range of post-celestage useful for developing novel assays for a wide range of post-celestage useful for developing novel assays for a wide range of post-celestage useful for developing novel assays proteolysis, phosphorylation, celestage celestage useful for developing novel assays for a wide range of post-celestage useful for developing novel assays for a wide range of post-celestage useful for developing novel assays for a wide range of post-celestage useful as disease proteolysis, phosphorylation, prenylation, celestage useful for creating celestage useful for creating celestage useful for creating celestage useful as disease models and transgenic plants with celestage useful as disease models and transgenic plants with celestage useful as disease models and transgenic plants with celestage useful as a natural fluorescent protein, dsFP483 celestage useful for creating celestage useful as a reporter moiety in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δ

capable of undergoing energy transfer by either donating or accepting excited state energy to the fluorescent ion. The membrane is then exposed to excitation light and the energy transfer between the reagents is measured and related to the membrane potential. The method is useful for detecting changes in membrane potential in subcellular organelle membranes in biological systems. The method is used for screening of test chemicals for activity to modulate the activity to of target ion channel. The invention also provides a transgenic organism comprising a first reagent that comprises a charged hydrophobic fluorescent molecule and a second reagent comprising a bioluminescent or naturally fluorescent protein. The present sequence is Discosoma species (red) DNA encoding an Anthozoa fluorescent protein (FP), drFP583
                                                                                                                                                                                                                                                                                                                                               The patent discloses optical methods and compositions for determining transmembrane potential across biological membranes in living cells. The method of determining the electrical potential across a membrane in a biological system comprises introduction of two reagents, a first reagen comprising a hydrophobic fluorescent ion capable of redistributing from first face of the membrane to a second face of the membrane in response to membrane potential change and a second reagent that label the first face or the second face of the membrane in complore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Determining electrical potential across a membrane in biological systems, comprises introducing two reagents, exposing the membrane to light and measuring the energy transfer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        13-DEC-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 150; 154pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           99US-00459956
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  δ
The invention relates to DNA (I) containing either sequence ABA95905 o sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (YRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum o Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so genera RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio
                                                                                                                                                                                                                                                                                                                                                                   New DNA encoding red fluorescent protein, biotechnology, has sequence optimized for especially yeast or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI;

                                                                                                                                                                                                                                                                       US-10-006-922A-12 (1-225) x ABA95922 (1-678)
                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence ABAS596 encoding a yeast optimised Red Fluorescent Protein (yRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present sequence is that of a polynucleotide encoding the yeast optimised RFP,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New DNA encoding red fluorescent protein, useful as marker biotechnology, has sequence optimized for expression in euk especially yeast or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Yeast; red fluorescent protein; RFP; plant; transgenic; GFP; Saccharomyces cerevisiae; Nicotiana tabacum; Arabidopsis thaliana; Escherichia coli; green fluorescent protein; biotechnology; gene;
The invention relates to DNA (I) containing either sequence ABA95905 sequence ABA95906 encoding a yeast optimised Red Fluorescent Protein (yRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially yeast, especially Saccharomyces cerevisiae and plants, especially dicotyledonous plants including Nicotiana tabacum
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Yeast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABA95921;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABA95921
                                                                                                                                                                                               New DNA encoding red fluorescent protein, useful as marker in biotechnology, has sequence optimized for expression in eukary especially yeast or plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DE20001395-U1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Anthozoa.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present sequence is that of a polynucleotide encoding the yeast optimised RFP,

                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to DNA (I) containing either sequence ABA95905 or sequence ABA95906 encoding a yeast optimised Red Fluorescent protein (VRFP). (I) are used to express red fluorescent protein (RFP) in eukaryotes, especially dicotyledonous plants including Nicotiana tabacum or Arabidopsis thaliana and also in prokaryotes, especially bacteria, especially Escherichia coli. RFP is useful in the same way as green fluorescent protein but is more generally applicable in modern biotechnology. (I) are optimised for expression in yeast and so generate RFP at higher levels with stronger fluorescence and thus lowers the detection limit and gives a better signal-to-noise ratio. The present sequence is that of an RNA sequence corresponding to the yeast optimised RFP encoding cDNA given as SEQ ID NO 1 (ABA95905)
                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 678 BP; 198 A; 147 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New DNA encoding red fluorescent protein, useful as marker biotechnology, has sequence optimized for expression in eulespecially yeast or plants.

CC The invention relates to nucleic acid molecules encoding non-aggregating CC chromo/fluorescent proteins and their mutants. Chromo/fluoro proteins are CC cuseful in analyte detection assays, as colouring agents, as markers in CC recombinant DNA applications, as sunscreens or filters, in fluorescence CC resonance energy transfer (FRET) applications, as biosensors in CC prokaryotic and eukaryotic cells, in screening assays, as second CC messenger detectors, in fluorescence activated cell sorting applications, in protease cleavage assays or as fluorescent timers. The present CC in protein of the invention

                                                                                                   The invention relates to a fluorescent timer protein having an emission spectrum that changes over time after synthesis from a first wavelength control of the activity of a promoter, determining the age of a protein, converting the activity of a promoter, determining the age of a protein, controling a population of cells comprising a fluorescent timer protein are also useful for assessing gene carivity, an agent that modulates the activity of a promoter and in controling a population of cells comprising a fluorescent timer protein. The fluorescent timer proteins are also useful for assessing gene cellular differentiation, in response to a drug or other inducer of collular differentiation, in response to a drug or other inducer of compression during intracellular protein movement or translocation, controlled the activity of a regulatory element, for determining cell fate during development and organ remodelling, in spatial and temporal controlled to favore the activity of a regulatory element, for determining cell in distinguishing between newly formed and pre-existing structures, e.g. contending the proteins and accumulated proteins, and continuated proteins and extracellular matrix components. The fluorescent timer proteins may further be used to investigations where photobleaching techniques are employed, as detectable labels, as selectable markers, as biosensors in prokaryotic and eukaryotic cells, in protease cleavage assays, and as second messenger detectors. The nucleic acids can be used to generate transgenic, non-human plants or animals or site-specific gene modifications in cell lines. The present sequence is a DNA encoding conscious proteins fluorescent proteins.

Sequence is a DNA encoding generating fluorescent proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New fluorescent timer proteins comprising an emission spectrum that changes over time from a first wavelength to a second wavelength, useful for monitoring intracellular protein movement, translocation, trafficking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  promoter activity; gene expression; transgenic

                                                                                                                                                                                                                                                                                                         The invention describes a polynucleotide sequence (I) encoding a CC Discosoma red fluorescent protein (DBRed) variant having a reduced CC propensity to oligomerise, comprising amino acid substitutions at the AB CC and/or AC interfaces of the wild-type DBRed sequence (SI) comprising 225 cm and acids, given in the specification, where the substitutions result in reduced propensity of the DBRed variant to form tetramers. (I) is CC useful for detecting transcriptional activity by providing a host cells CC conatining a vector which comprises (I) operatively linked to an CC expression control sequence, and an unit to assay the variant fluorescent protein fluorescent protein fluorescent protein fluorescence, and assaying fluorescence of the variant fluorescent cC closalisation protein produced by (VII), where variant fluorescent protein fluorescence is indicative of transcriptional activity. A polynucleotide CC closalisation or trafficking of a polypeptide of interest. A polypeptide cC carget protein produced, where the target protein and amount of a CC target protein produced, where the target protein is fused to the marker, CC as a complement to or alternative for the green fluorescent protein or its spectral variant, for detecting induction of transcriptions, in CC which detects events as the function of the movement of fluorescent (FRET), CC which detects events as the function of the movement of fluorescent (CC interaction for ions and molecules such as Ca2+, Zn2+, for identifying the CC interaction of a first and second molecule, for determining whether a CC interaction of a first and second molecule, for determining whether a CC sample contains an enzyme or for otermining the pH of the sample. (I) is sample contains an enzyme or for determining the pH of the sample. (I) is sample contains an enzyme or for determining the pH of the sample. (I) is of an expression control sequence. This sequence encodes Discosoma wild-type red fluorescent protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a novel method of identifying ligands to an orphan receptor protein which comprises transforming cells with DNA encoding a fusion protein of the orphan receptor with a fluorescent protein, so that the fusion protein is expressed in the cells (or cell membranes isolated from them) and contacting the cells with the potential ligand to be tested. A suitable fluorescent protein for incorporation in the fusion protein is green fluorescent protein (GFP), for example GFP-1, wild-type GFP, GFPuv or Enhanced GFP (EGFP). The method is useful for the identification of ligands binding to an orphan receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Transformation of cells with a fusion protein of an orphan receptor protein with a fluorescent protein useful for identification of ligands to the orphan receptor.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                        The invention relates to a polynucleotide sequence encoding a Discosoma red fluorescent protein (DsRed) variant having a reduced propensity to oligomerize. The protein variant comprises one or more amino acid substitutions at the AB and/or AC interface(s) of the wild-type DsRed sequence, where the substitutions result in reduced propensity of the DsRed variant to form tetramers and where the variant displays detectable fluorescence of at least one red wavelength. The composition and methods are useful in producing red fluorescent proteins having reduced propensity for oligomerization, especially tetramerization. The protein may be used in molecular biology and in other scientific applications, such as in immunoassays or hybridization assays, or in tracking the movement of proteins in cells. This sequence corresponds to the DsRed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New monomeric and dimeric Anthozoan fluorescent protein variants reduced propensity to oligomerize, and encoding polynucleotides, in molecular biology, e.g. in immunoassays or in tracking proteir
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ds; gene; red fluorescent protein; DsRed; fluorescence; red wavelen oligomerization; tetramerization; immunoassay; hybridization assay.

The present invention relates to nucleic acid that encodes a rapidly commaturing chromo or fluorescent mutant of a Chidarian chromo- or fluorescent protein or its mutant. The protein is useful in applications convolving nucleic acid encoding a chromo- or fluorescent protein and is useful for producing a chromo and/or fluorescent protein which involves growing the cell, whereby the protein is expressed, and isolating the composition involving chromo- or fluorescent protein are useful in composition involving chromo- or fluorescent protein and is useful as pck primers, hybridization probes, etc. The expression cassettes are useful for synthesizing related proteins. The chromoproteins are useful as pck primers, hybridization probes, etc. The expression cassettes are useful as particular composition of matter e.g. food compositions, pharmaceuticals, commercies, living organisms, e.g., animals and plants. The chromoproteins compositions, pharmaceuticals, in applications, e.g. the production as selectable markers in recombinant to biological analytes of interest and as selectable markers in recombinant compositions, e.g. the production of transgenic cells and organisms. The fluorescence resonance energy transfer (FRET) applications, as biosensors in prokaryotic and eukaryotic cells, in applications involving the automated screening of arrays of cells expressing fluorescent creporting groups by using microscopic imaging and electronic analysis, as second messenger detectors, and in fluorescence activated cell sorting applications and as in vivo marker in animals. The fluorescent proteins can also be used is assays to determine the phospholipid composition in biological composition in biological membranes and as a fluorescent timer. The present sequence represents the wild-type DeRED encoding sequence.
Novel nucleic acid encoding a rapidly maturing chromo- or fluorescent mutant of a Chidarian chromo- or fluorescent protein or its mutant, useful for applications involving chromo- or fluorescent proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 8; SEQ ID NO 1; 65pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            useful for applications involving chromo-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            P-PSDB; ADN33979.

 The invention relates to binding ligands (fluorobodies) with intrinsic fluorescence, which comprises green fluorescent protein (GFP) having heterologous binding sites. The binding ligand is useful for detecting the target molecule and is efficiently detects the target molecule. The
                                                                                                         Novel binding ligand with intrinsic fluorescence and comprising fluorescent protein having heterologous binding sites, useful for detecting target molecule.

The method is useful in developing a sensor cell for determining the activity of a target gene in the cell. The sensor cell and the methods are useful in developing new and therapeutic drugs directed to the targets. The present sequence is a coding sequence shown in the exemplification of the invention.

DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
Naming Conventions: BST name is generated by the concatenation of
the JGI Clone Id and the direction of sequencing. The suffix '.fwd'
indicates a forward sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
small Insert: Based upon one or more sequencing reads of this clone
where vector sequence was present at both ends, this clone has been
determined to contain a cDNA insert on the order of 600-1000 bases.
Plate: AOSF 0009 row: f column: 20
High quality sequence stop: 557.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BI385436
BFL26_000139 Amphioxus 26hr cDNA library (Name convention: BFL26 or MPMGp531) Branchiostoma floridae cDNA clone MPMGp531H0446 5', mRNA
(ONFP) to reduce sequencing redundancy. According to the ONFP procedure, clones giving the same hybridisation pattern with a battery of 200 8mer oligonucleotide the grouped into clusters. One clone per cluster is selected for sequencing. The size of each cluster is an indicator of the frequency of a transcript in the analysed library. The cluster size as well the coordinates of the rest of the clones assigned to the same fingerprint cluster as the clone from which the above EST is generated is available at the amphioxus project site at: http://www.molgen.mpg.de/amphioxus/
